

NRC Nuclear Fellowship And Scholarship Award

The objectives of this program are to attract and educate superior undergraduate (scholarship) and graduate (fellowship) students in the nuclear engineering discipline. This will be accomplished with financial resources from the NRC and academic and administrative resources from the Department of Nuclear, Plasma and Radiological Engineering (NPPE) at the University of Illinois. This program will ensure that the best and brightest students will join the nuclear workforce following a very strong, competitive education in nuclear engineering. The specific goals are to attract and support at least eight (8) undergraduate and four (4) graduate students each year under this program.
